

you are already used to CardFive new editions
but you are not used to

cardfive vision

professional card design software

identification has never been so easy

We named this new edition **CardFive Vision** because with it NFive has crossed a new frontier towards the making of **the most robust and user friendly professional software for printing cards.**

With CardFive Vision you will be working on a dark and neutral background so that what stands out is your work... it's easy to make good looking cards when every other element on the screen is there to help.

The dashboard and the newly invented sliders concept keeps all your tools handy and lets you work with no pop ups over your work and no extra clicks to find what you need. You have real time results as you can immediately see the changes you are making.

You can design and store different layouts for the same card and associate users in your database with card layouts so that it is simple to produce differentiated card editions.

Using keywords to search the ClipArt library makes it easy to find the perfect concept and you can upload and classify your own images to grow the library.

You will be able to work on your database just as before but if you really want to explore it you can enter Database layout with a mouse click.

With a very robust structure CardFive Vision is full of small details. We would need a really looong brochure if we were to list them all so instead we invite you to discover them:

We have done more than a thousand features... how many can you find?
